To Members of the United States Senate:

Subject: Support confirmation of Drs. R. F. Kennedy, Jr., Makary, and Bhattacharya

I am a scientist known in scientific societies for my independence, integrity, and the highest moral standards. On behalf of my 5 children, people of the U.S., and future generations of American children and parents, I am asking you to support the confirmation of Dr. Robert F. Kennedy, Jr. as Secretary of the Department of Health and Human Services (DHHS), Dr. Martin Makary as FDA Commissioner, and Dr. Jay Bhattacharya as Director of the NIH. I am asking you to ignore the pressure of currently ruling elites; they are driven by their conflict of interests and are responsible for the deep crisis of U.S. healthcare.

President-elect Trump has received massive mandate from American people to rectify the crisis. I believe that Drs. Kennedy, Makary, and Bhattacharya are his excellent choice for the leadership to make America healthy again. The triad enjoys the greatest public trust built by their scientific publications, transparency and integrity of social position shown in their books, research papers, and The Great Barrington Declaration.

Current U.S. establishment, which is responsible for gigantic losses caused by COVID-19 pandemic, will certainly resist. I am closely familiar with the state in my area of molecular diagnostics. By 2014 our team of scientists and engineers in TIRF Labs (www.tirf-labs.com) has developed i-Diagnostics (www.i-diagnostics.net) and TIRF Analytix platforms that could prevent COVID-19 pandemic and minimize damages from existing diseases. However, corruption in the NIH, FDA, and CDC and suppression of free speech deprived Americans from precision diagnostics for home-use and from efficient inexpensive treatments. My colleagues and I have crystal clear evidence that the only one reason for their sabotaging of our and other products was the fact that the corrupt establishment can't pocket billions of dollars using our inexpensive and efficient products.

In their letter from December 9, 2024, 77 Nobel Prize winners severely distorted scientific data and social positions of Drs. Kennedy, Makary, and Bhattacharya. Their letter exemplifies one more attempt of suppressing the truth provided by scientists of integrity. Overproduction of elites and corruption of large cohorts of ruling establishment are typical symptoms of the terminal phase of cliodynamic cycles (www.petertuchin.com). Back in history resolving of the terminal phase crisis frequently resulted in violence. However, there are several examples of peaceful transitions. Americans gave to President Trump overwhelming mandate to perform ***peaceful transition*** to new golden era of the U.S. In many areas, however, it will require reforms that will not please the corrupt fraction of U.S. establishment.

Acknowledgment of achievements in the area of healthcare should not preclude concerns about the fact of massive chronic diseases, the fact that ~30% of pharmaceuticals at the U.S. market are useless and toxic; FDA approved them under the conflict of interests. Scientists of integrity do not deny certain short-term positive effects of water fluoridation, but are concerned about its long-term detrimental effects on the entire population. Many of long-term effects are, in principle, not verifiable during a lifespan of one generation. Scientists of integrity do recognize positive effects of safe vaccination, but oppose to immoral experiments, where humans are used as genie pigs for testing dangerous mRNA bioweapons, long-term effects of which is impossible to predict, but short-term effects have claimed tens of thousands of lives.

Drs. Kennedy, Makary, and Bhattacharya are excellent, superior choice made by the President Trump. To make America healthy again I am asking you to support the trio.

With highest regards,

Dr. Alexander Asanov
